WORK EXPERIENCE SUMMARY

2007 TO PRESENT:

FREELANCE C#, ASP.NET
&
SQL SERVER DEVELOPER

2007 to Present:
Freelance C#, ASP.NET and SQL Server
Architect/Developer.

A freelance operation is essentially a small business, and as such requires many different skills to work.

By taking on work as a freelancer, I intended to expose myself to the types of pressures experienced by stakeholders, managers & the many others involved in running a software development business.

I've gained solid experience in project scoping, analysis & design, working to a tight timeframe & budget, right through to delivery & support of working software systems.

Clients include:

PCL Ltd.: 2x E-commerce ASP.NET web sites.

Infobiz Ltd.: Real estate marketing database & data entry software.

eGroup Ltd.: Automated XML import tools for an online database.

People Development Systems Ltd.: Full web application product development in SQL Server & ASP.NET. Application for conducting online surveys & powerful graphical analysis of results.

2004 – 2006:

Software Development Team Leader, CMS Ltd., a small software start-up. Microsoft Technologies - C#, ASP.NET & SQL Server.

Analysis & Design of business software, and leading small a team of developers and contractors through the entire SDLC. High customer contact.

This was a product development role in which we developed a successful software product from scratch, then added configurable components for each new client's individual requirements.

The product could be described as an ERP system for specific Local Government requirements.
